What is Digequal (**) about?

DigEqual is a European project to make online services and e-government simpler for adults and adult educators.

E-government is the public administration delivered online improving the way citizens can access information and services or participate to a more considerable extent in society.

We have investigated the everyday scenarios faced by citizens in accessing e-government, and we have asked about the experience of adult educators in how they approach e-government in their digital education classes.

The Internet and information technologies have transformed many aspects of daily life, such as health, education, leisure and work. Keeping up with technology means engaging in socially active behaviour as well as in being able to participate to the wider extent of society.E-government is more and more key to being a citizen in nowadays Europe.

Our investigation shows how there is still a gap between educators and adults in Europe, and that there are barriers from both sides in the access/use of e-government.

About half of the educators efficiently use online services in their daily lives, while the remaining half do not use them due to a lack of competence in using digital services or because they consider them worse than face-to-face services.

Co-funded by the European Union

How does Digequal (...) classify e-government for adults & educators?

- e-government literacy
- e-education
- e-billing
- e-leisure
- e-health
